Overview

Name:	Archlinux
Picture:	
Active	Yes
Purpose	General Linux
Ignition install	
Compatibility	Clearfog Pro (a38x)
More information	
Maintained by	ArchLinux-ARM team
Forum	
Website	archlinuxarm.org

Description

Arch Linux is a Linux distribution for computers based on different architectures. It is composed predominantly of free and open-source software, and supports community involvement.

The design approach of the development team follows the KISS principle (“keep it simple, stupid”) as the general guideline, and focuses on elegance, code correctness, minimalism and simplicity, and expects the user to be willing to make some effort to understand the system's operation. A package manager written specifically for Arch Linux, pacman, is used to install, remove and update software packages.

Arch Linux uses a rolling release model, such that a regular system update is all that is needed to obtain the latest Arch software; the installation images released by the Arch team are simply up-to-date snapshots of the main system components.

Installation

This installation method produces a SD card with the official ArchLinuxARM installation. It simply performs all the steps described on the ArchLinuxARM pages for you.
